Before you see the signs...

**Bimectin® (ivermectin)**

*Injection for Cattle & Swine or Pour-On for Cattle*

---

**Bimectin® (ivermectin)**

**INJECTION FOR CATTLE & SWINE**

1% Sterile Solution

**FEATURES**
- Ivermectin parasiticide for internal/external parasites
- Single, small volume dose required
- Safe, rigid plastic vials in individual cartons/multiple sizes

**FUNCTIONS**
- Effective in both beef cattle & swine
- Causes paralysis and death of parasites
- Helps prevent re-infection

**BENEFITS**
- Broad spectrum and effective activity against parasites
- Easy to grip, safety packaging reduces breakage and protects from sunlight damage
- Economical, convenient small volume dose is easy to administer
- Safe: approved by FDA

---

**Bimectin® (ivermectin)**

**POUR-ON FOR CATTLE**

Contains 5 mg ivermectin/mL

**FEATURES**
- Ivermectin parasiticide for internal/external parasites
- Single, small volume dose required (1 mL per 22 lbs)
- 5 convenient sizes

**FUNCTIONS**
- Effective control of a wide range of internal/external parasites in beef cattle
- Penetrates quickly to reach and kill parasites
- Breeding animal tolerated

**BENEFITS**
- Broad spectrum and effective activity against parasites
- Quick penetrating and long-acting against significant parasites
- Pour-on formula reduces handling stress on animals
- Packaging sizes offer flexibility for many situations
- Safe: approved by FDA

BIMECTIN® INJECTION FOR CATTLE & SWINE
(ivermectin) 1% Sterile Solution

INDICATIONS:
Cattle: Bimectin® Injection is indicated for the effective treatment and control of the following harmful species of gastrointestinal roundworms, lungworms, grubs, sucking lice, and mange mites in cattle:

Gastrointestinal Roundworms:
- Ostertagia ostertagi (including inhibited state)
- Haemonchus placei
- Trichostrongylus axei
- T. colubriformis
- Cooperia oncophora
- Cooperia punctata
- C. pectinata
- Oesophagostomum radiatum
- Bunostomum phlebotomum
- Nematodirus helvetianus
- N. spathiger (adults only)
- Lungworms (adults and fourth-stage larvae):
  - H. lineatum
  - Sucking Lice:
  - Linognathus vituli
  - Haematopinus eurysternus
  - Solenopotes capillatus
- Mites (scabies):
  - Psoroptes ovivorum (syn. P. communis var. bovis)
  - Sarcoptes scabiei var. bovis

Swine: Bimectin® Injection is indicated for the effective treatment and control of the following harmful species of gastrointestinal roundworms, lungworms, lice, and mange mites in swine:

Gastrointestinal Roundworms:
- Large roundworm, Ascaris suum (adults and fourth-stage larvae)
- Red stomach worm, Hysteroglypneus rubidus (adults and fourth-stage larvae)
- Nodular worm, Oesophagostomum spp.
- (adults and fourth-stage larvae)
- Threadworm, Strongyloides ransomi (adults)
- Somatic Roundworm Larvae:
  - Threadworm, Strongyloides ransomi (somatic larvae)
- Seven days before farrowing to prevent infection in piglets.

Lungworms:
- Metastrongylus spp. (adults)
- Lice:
  - Haematopinus suis
- Mange Mites:
  - Sarcoptes scabiei var. suis

BIMECTIN® POUR-ON FOR CATTLE
(ivermectin) Contains 5 mg ivermectin/mL

INDICATIONS: Bimectin® (ivermectin) Pour-On applied at the recommended dose level of 500 mcg/kg is indicated for the effective treatment and control of these parasites.

Gastrointestinal Roundworms:
- Ostertagia ostertagi (including inhibited state)
- Haemonchus placei
- Trichostrongylus axei
- T. colubriformis
- Cooperia oncophora
- Cooperia punctata
- Cooperia surinamensis
- Strongyloides papillosus
- Oesophagostomum radiatum
- Trichuris spp.

Lungworms:
- Dictyocaulus viviparus

Swine: Bimectin® Injection is indicated for the effective treatment and control of the following harmful species of gastrointestinal roundworms, lungworms, lice, and mange mites in swine:

Gastrointestinal Roundworms:
- Large roundworm, Ascaris suum (adults and fourth-stage larvae)
- Red stomach worm, Hysteroglypneus rubidus (adults and fourth-stage larvae)
- Nodular worm, Oesophagostomum spp.
- (adults and fourth-stage larvae)
- Threadworm, Strongyloides ransomi (adults)
- Somatic Roundworm Larvae:
  - Threadworm, Strongyloides ransomi (somatic larvae)
- Seven days before farrowing to prevent infection in piglets.

Lungworms:
- Metastrongylus spp. (adults)
- Lice:
  - Haematopinus suis
- Mange Mites:
  - Sarcoptes scabiei var. suis
