Offer veterinarians a cephalexin reinvented for their canine patients. **RILEXINE®** (cephalexin) **Chewable Tablets for Dogs** is an easy-to-dose, palatable, first-generation cephalosporin and the only one designed specifically for veterinary use.

### Features/Functions

<table>
<thead>
<tr>
<th>Features/Functions</th>
<th>Benefits</th>
</tr>
</thead>
<tbody>
<tr>
<td>Highly palatable, dog-friendly formulation.</td>
<td>Makes dosing easier and may help increase compliance.</td>
</tr>
<tr>
<td>Scored tablets in 3 strengths (150 mg, 300 mg, 600 mg).</td>
<td>Provides flexible and more precise dosing for dogs of all sizes.</td>
</tr>
<tr>
<td>Proven effective against <em>Staphylococcus pseudintermedius</em>—the organism responsible for ~90% of canine pyoderma cases.¹²</td>
<td>Promotes antimicrobial stewardship by safely and effectively targeting superficial pyoderma (saving use of broader-spectrum cephalosporins for more serious conditions).</td>
</tr>
</tbody>

Solving the issue of compliance.

Human cephalaxin may not be a good fit for clinics:

- Strong odor and bitter metallic taste that dogs may refuse
- Capsules cannot be split, preventing tailored dosing
- Pet owner frustration may result in sporadic administration

RILEXINE® (cephalexin) Chewable Tablets for Dogs are easy to give and easy to take:

- Highly palatable tablets
- Scored for precise, twice-daily dosing
- Encourages consistent dosing and better compliance

80.77% of dogs voluntarily accepted

RILEXINE® Chewable Tablets for Dogs
Available in 3 strengths

Qualify: Identify if a Virbac representative has been in recently:

Doctor, has your Virbac representative discussed RILEXINE Chewable Tablets for Dogs with you recently?

If YES, confirm and discuss benefits
If NO, engage/detail the customer as the primary contact

Contraindicated in dogs with a known allergy to penicillins or cephalosporins. For oral use in dogs only. Not for use in humans. Individuals sensitive to penicillins or cephalosporins should avoid contact of the product with the skin and mucous membranes. Do not prescribe in the absence of a proven or strongly suspected bacterial infection. Safety in breeding, pregnant, or lactating bitches has not been evaluated. The most common adverse reactions in dogs include diarrhea, vomiting, anorexia and lethargy. For complete product information, refer to the product insert. To obtain a package insert, contact Veterinary Technical Product Support at 1-800-338-3659, or visit www.virbacvet.com.

Available in 3 strengths

* In dogs caused by susceptible strains of Staphylococcus pseudintermedius.
