

PORUS[®] ONE

For the support of feline kidney health

Key Feature #1:

Porus[®] One binds protein byproducts in the intestines where they are then excreted in the feces. As a result, the byproducts cannot be converted into uremic toxins.

Its Benefit:

Reducing uremic toxin production supports kidney health.

Key Feature #2:

Porus[®] One has no metabolism or absorption. It is excreted in the feces and there is no accumulation in the body.

Its Benefit:

It is generally well tolerated.

Key Feature #3:

Porus[®] One has no taste or smell and is readily accepted by cats.

Its Benefit:

It's very palatable and can be easily administered once daily at mealttime.

How does Porus[®] One work?

Porus One binds protein byproducts in the intestines where they are then excreted in the feces.* As a result, the byproducts cannot be converted into uremic toxins.

Reducing uremic toxin production supports kidney health

Has Porus One been studied?

In an 8-week study of 18 healthy geriatric cats (11-16 years of age):

- 12 cats received 500 mg Porus One daily
- 6 cats served as negative control
- All cats on same type of food

The mean serum indoxyl sulfate concentration was reduced by more than 60% in the Porus One group while no significant change was observed in the control group.**

*Data on file.

CHECK-OFF & ECHO NOTES

First, always ask if a Dechra representative has been in contact recently:

Doctor, have you recently been introduced to Porus One for Cats?

Porus[®] One binds protein byproducts in the intestines where they are excreted in the feces. This binding process helps to prevent the byproducts from being converted into uremic toxins, which supports kidney health.

Confidence

I believe Porus[®] One will provide an important tool for managing feline kidney health in your patients.
