

Hyvisc®
(hyaluronate sodium)

Hyalovet®
(hyaluronate sodium)

Flexibility for them. Reliability for you.

**ESCAPE THE SHADOWS OF JOINT DISEASE
WITH HYVISC® AND HYALOVET®**

KEY FEATURE #1:

Hyvisc® (hyaluronate sodium) and Hyalovet® (hyaluronate sodium) are proven safe and effective.

KEY FEATURE #2:

HYVISC and HYALOVET have a long history of success.

KEY FEATURE #3:

HYVISC and HYALOVET are flexible.

ITS BENEFIT:

They are the industry-leading, FDA-approved HAs currently available for the intra-articular treatment of joint dysfunction in horses, due to non-infectious synovitis associated with equine osteoarthritis.

ITS BENEFIT:

With more than 45 years of combined treatment success, HYVISC and HYALOVET have a strong reputation of delivering targeted relief right to the source.

ITS BENEFIT:

Whether you're short on refrigeration space or prefer doses in a preloaded syringe, the multiple presentations of HYVISC and HYALOVET allow you to select the option that works best for you.

HYVISC AND HYALOVET IMPORTANT SAFETY INFORMATION: As with any intra-articular injection, a mild inflammatory response (tenderness, heat, swelling) may be seen in the joint following injection. The response is self-limiting but may last from 2 to 5 days after treatment. If inflammation is excessive or severe, the possibility of infection should be considered and appropriate antibiotic therapy instituted. HYALOVET and HYVISC are for intra-articular use only. Not for human use. CAUTION: Federal law restricts these drugs to use by or on the order of a licensed veterinarian. For complete product information, please refer to respective HYALOVET and HYVISC package inserts.

Escape the shadows of joint disease

DELIVER TARGETED RELIEF WITH HYVISC® (HYALURONATE SODIUM) AND HYALOVET® (HYALURONATE SODIUM)

Although the joint is engineered to provide virtually frictionless motion, cyclic micro-injuries from training and competition can lead to joint inflammation. When left untreated, inflammation can progress with few clinical signs before resulting in irreversible cartilage degradation and osteoarthritis (OA).

OA is the leading cause of equine lameness. Early detection, accurate diagnosis and aggressive treatment will give your patients a greater chance at maintaining soundness and longevity.¹

HYVISC and HYALOVET are here to treat joint dysfunction right at the source. Administering pure hyaluronic acids (HAs) like HYVISC and HYALOVET helps to restore viscoelasticity, decrease the presence of inflammatory mediators, and contribute to cartilage repair.^{2,3}

JOINT HEALTH SOLUTIONS FOR EVERY HORSE

Free To Move is more than just a joint health portfolio with five industry-leading brands. It's how Boehringer Ingelheim wants every horse to feel.

Whether helping athletes reach their full potential or maintaining comfort for cherished companions, the Boehringer Ingelheim joint health portfolio offers reliable solutions to keep their story moving forward.

sound CHECK-OFF & ECHO NOTES byte

First, always ask if a Boehringer Ingelheim representative has been in contact recently:

Doctor, have you recently been introduced to HYVISC AND HYALOVET?

If **YES**, confirm and discuss benefits.

If **NO**, engage/detail the customer as the primary contact.

Confidence

I believe HYVISC and HYALOVET will provide an important tool for managing joint dysfunction in horses due to non-infectious synovitis associated with equine osteoarthritis.

Neutral invitation

Let's take a look at some basic information about HYVISC and HYALOVET...

It's the customer's decision

...so you can decide whether HYVISC and HYALOVET is a solution you'll consider for your patients presenting with signs of joint dysfunction.

HYVISC AND HYALOVET IMPORTANT SAFETY INFORMATION: As with any intra-articular injection, a mild inflammatory response (tenderness, heat, swelling) may be seen in the joint following injection. The response is self-limiting but may last from 2 to 5 days after treatment. If inflammation is excessive or severe, the possibility of infection should be considered and appropriate antibiotic therapy instituted. HYALOVET and HYVISC are for intra-articular use only. Not for human use. CAUTION: Federal law restricts these drugs to use by or on the order of a licensed veterinarian.
